DETAILED ACTION

1. Claims 1-3 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Voigtman et al (2,996,424 or 3,017,317), or Donnelly (3,014,832).

Voigtman et al and Donnelly disclose the addition of ketene dimer to tissue paper, including multiply or layer tissue paper. It is applied to the web in the form of an emulsion. The ketene dimer is present in the web in an amount of between 0.5 to 50 pounds/ton of web in Voigtman et al and 0.01 to 25 pounds/ton web in Donnelly. The amounts used do not adversely affect the absorbency of the tissue paper. The fibers disclosed by the references inherently includes the "long fibers" and thus Voigtman et al and Donnelly anticipates the claimed invention or at the least, it would have been obvious to use "long fibers". In regard to claim2, the absorbency rate is inherently shown by the references since the same amount of ketene dimer is used.

2. Claims 4-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Voigtman et al (2,996,424 or 3017,317) or Donnelly (3,014,832).

The references employ an aqueous emulsion of ketene dimer. It is well known and understood that ketene dimers are water insoluble and hydrophobic and require an emulsifier or surfactant to produce an emulsion. Thus it would have been obvious to employ a surfactant for the ketene dimer. Moreover, it is especially obvious since it is standard and conventional practice in the art to add surfactants to tissue paper to improve softness and absorbency.
